GROUP 3600

1. (amended three times) A modular deck panel apparatus for a deck structure including a plurality of underlying joist elements, each one of said plurality of joist elements having a top longitudinal surface, said modular deck panel apparatus comprising:

a plurality of modular panels, each of the plurality of modular panels having a first substantially planar element being relatively inflexible, each of said plurality of modular elements having a thickness dimension;

a second substantially planar element disposed beneath the first planar element and secured thereto, said second planar element being relatively flexible in relation to the first planar element; and

a plurality of elongated members, a first portion of the plurality of elongated members being secured at intervals along top longitudinal surfaces of a series of underlying joist elements, and a second portion of the plurality of elongated members spanning between successive joist elements and engaging the first portion of the plurality of elongated members to restrain the plurality of modular panels, said first portion of the plurality of elongated members extending
